Media Event INVITATION

OFFICIAL START UP OF THE RECENTLY COMPLETED MICROTURBINE PROJECT

Mayor Colin Kinsley and Prince George City Council invite you to a media photo opportunity at the City's Lansdowne Road Wastewater Treatment Plant on September 5th at 2:30 p.m.

The event will be the official start up of the recently completed microturbine project that uses waste methane digester gas to provide heat and power for use at the facility. The 5 turbines will generate approximately 40% of the power required to run the facility and 100% of the process heat.

The turbines are the first application of this technology in Canada that uses digester gas as a fuel.
